

In-house stations for Standard Systems in Door Communication

ISH1030

TC2000

ISH1030
... is a door-telephone offering 13 different ring tones for front-door, flat-door and internal calls.

TC2000
... is a series of intercom devices for which individual telephones and signal indicators as well as ring tones can be selected.

-> **TCS-packages**
home:packs are a high-quality offer for standard applications in the area of one-family and semi-detached houses. **pre:packs** are ideal for up to 8 residences. For further information please refer to the product catalogue.

IMM1000 IMM1100

IMM1000 and IMM1100
Audio in-house station series
acoustic and optical distinction for front-door, flat-door and internal call
choice of 13 melodious ring tones
ring tone mute with optical display
flat-door release can be activated
functions keys ex works: configured with control function / alternate allocation e.g.: specific internal call and door release, automatic door release, redirecting

Typical field of application:
In all audio systems like living or business area and in combination with video in-house stations

VML30

VM(X)
monitor black/white or colour with TFT-display
Video-indoor station optional surface-mount or flush-mount with simplex of duplex communication based on a video system 6-wire technique
blue coloured door release button, flat-door release can be activated
function key to switch between different cameras
light switch button with an alternate allocation: specific internal call or control function
function keys ex works: configured with control function / alternate allocation: specific internal call, automatic door release, redirecting
choice of 13 melodious ring tones
brightness, contrast and ring tone volume / adjustable by hand
ring tone mute with optical display
one parallel call can be activated
audio and video privacy functions and automatic call cut-off
audio and video in-house stations can be combined within one system
video signal input 1 Vpp BAS
colour: pure white
operating temperature range: 0°C to 40°C

VMH30

Typical field of application:
In residential and business areas. Ideal component for facility automation with two control function keys

Technical Advice and Custom Solutions by TCS

Our layout team will work out an optimal solution also for extraordinary tasks. We are there for you in any case. Our technical customer service and the field technician in the region offer comprehensive support so that a solution is quickly at hand.

For patent(ed) remedies.

From Simple Door Communication to in-house System

An Outline of the TCS-Product System

Front-Door Stations for Standard Systems of Door Communication

PAK03-EN PUK03-EN

The compact front-door station series PAK for surface-mount and PUK for flush-mount
PAK: projection 16 mm / PUK: Front panel of 3 mm metal bell buttons with gold-plated and maintenance-free contacts
win:clip™ principle
front-door stations also available as custom-made devices with engraving and individual button placement as well as stainless steel and various anodized colours

Typical field of application:
PAK in living areas of up to 8 residences
PUK in living areas of up to 30 residences

PES12/PET20-EN

The Comfort and Economic Front-door station series PDS/PDT and PES/PET
projection 20 mm
with bell button extension
long-life and energy-saving illumination of the nameplate
shatter-proof nameplate
special colours: various anodized and RAL-colours

Typical field of application:
PDS/PDT for up to 8 residences
PES/PET for up to 92 residences

VKA10-GH/02 VPUK01-EN

The Compact Video Front-door Station Series PUK
Identical features as the audio stations above

Typical field of application:
VPUK in living and business areas
one column for up to 8 residences
two column for up to 16 residences
three column for up to 24 residences

VKA10: black/white-camera for surface-mount outside
suitable for greatly differing light conditions
can be pivoted manually, very large pivot range

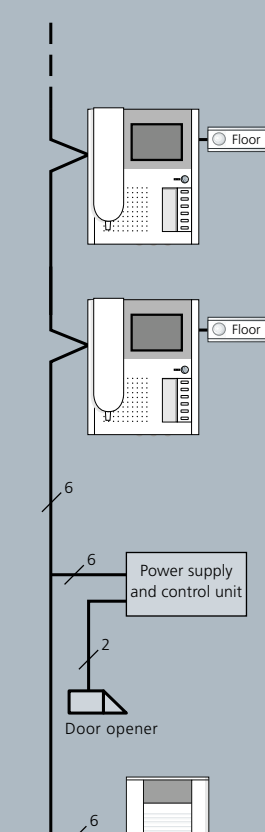

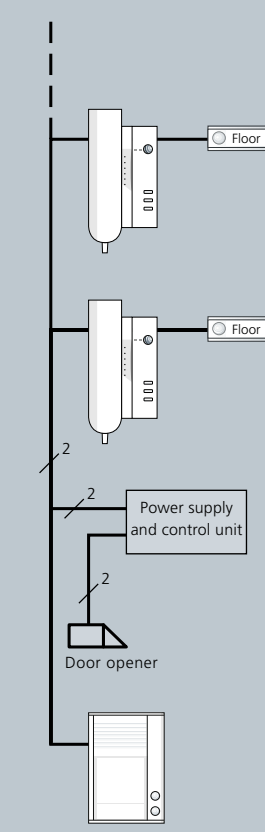

VPDS01-EN VPES08-EN

The Comfort and Economic Video Front-door Station Series VPDS and VPES
: Identical features as the audio stations above
: projection only 20 mm with video

With bell button extension PET/PDT
Individual designs and colours available as special products

Typical field of application:
VPDS/PDT in living area for up to 22 residences
VPES/PET in living area for up to 88 residences

Front-door Stations for Building Communication

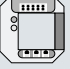

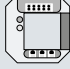

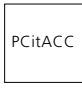

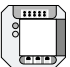

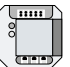

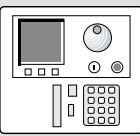

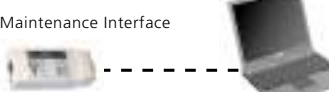

Display Front-door Station AD1 Flush-mount front-door station with a four digit 7-segment display, code lock function and a numeric dial keyboard. Two versions are available: for up to 60 residents and for larger buildings with up to 200 residents integration of video and access control as well as mail delivery lock possible	Display Front-door Station AD2 Flush-mount front-door station with a two rows text LC-display, code lock function and a numeric dial keyboard. for up to 200 targets/residents initiation of door calls via entering a target number Field of application: For condominiums of all sizes and business buildings	Display Front-door Station AD3 graphic LC-display with 128 x 128 dots simple operation optionally equipped with 16 keys keyboard or jog wheel flush-mount with front panel 3 mm material / colour: aluminium anodized nature Field of application: Larger residential and business buildings	Custom Solutions All display front-door stations can be tailored to individual customer desires with engraving, different designs, and the combination of functions, through surface finish and colour coat as well as the use of various materials.	Display Front-door Station AD4 : colour touch screen: 12.1" with large virtual key fields : easy and intuitive operation : multi-lingual operator guidance : can be supplemented with modules for access control, video, danger alert, concierge call and mail delivery lock : Information can be inserted (visiting hours, site plans) Field of application: Condominiums with up to 1000 residences and the sophisticated business area

Intelligent Product Network in the in-house System

TCS Extended Video Systems A broad product range offers more security for one-family and semi-detached houses, i.e. the insertion of camera images on TV. The system is also utilized in professional facility and area surveillance (Multi camera operation).	TCS-Product Range  Video-transmitter VZ501-EB  Video-receiver VZE01-EB  HF-Modulator	Utilization Scenario video image on TV video image on PC with TV-card with communication via telecommunication system multi-building surveillance and communication with central door-keeper station	Deployments Private residential area Mixed private-business buildings Office and business areas Factory area with central door keeper station	Additional Functions Due to the broad product range with functional and programmable attachments for the TCS:BUS complex building communication systems can be installed. Use this freedom for custom made solutions!
TCS Access Control Whether at the garage door or at the entry to the management floor or the securing of entire building complexes – TCS always offers an adequate solution. A comprehensive solution can be implemented from the code lock to the complex and integrated transponder application.	 With electrical Key  With code lock  User Software "access control"	individual access control with time zones and User Software temporary access via keys with limited validness provide additional security in connection with communication systems	Private living area in one-family home Mixed private-business buildings Office and production facilities Public areas, i.e. schools, associations etc.	
TCS External Networks and Systems Networks such as telecommunication and data networks can be linked to the TCS-product system with the TCS:BUS via interface devices. Thus, functions of a TCS-system such as door call, speaking, switching, controlling and reporting can be used globally via fixed and radio networks or the internet.	 Telecommunication Interface	utilization of telecommunication system such as group call, mobile phone etc. concierge stations with day/night circuit, call redirect to mobile phone emergency call systems in elevators and underground parking garages	Private living area Private-business buildings such as offices and doctors' rooms Business areas, such as public buildings, factories, underground garages and multi-storey car parks	Service Products The Service Device TCSK-01 is an optimal aid for the simple, quick and cost-saving inauguration as well as for easy maintenance of TCS-systems.
TCS House and Building Automation Sensores and combining devices are available for the building surveillance. Fault and condition messages can be recorded in order to control technical systems via switch modules or simply to turn on the light.	 Combining device with binary input / output, single BRE2-EB  Sensor with binary input, dual BMN2-EB	outdoor lamps can be switched movement or glass fracture detectors can issue reports gates, doors and windows are operated, conditions are recorded and reported, and previously programmed actions are carried out	Private living area in one-family home Mixed private-business buildings Business areas	The Maintenance Package serves as a connection to the TCS:BUS. TCS-software lets you check the system or the configuration i.e. for access control, combining devices and for concierge in-house stations.
TCS Call, Report and Concierge Systems Call systems such as concierge systems as well as alert and announcement functions can be implemented with this module. Fields of application are for instance homes for the elderly, factory master control systems.	 Control console GFA000 for alerting and announcement  Concierge in-house station PFS	at homes for the elderly emergency calls and announcement functions as well as acoustic room surveillance can be used. GFA000 lets rescue workers make announcements for groups or all residents control and telecommunication in one system	multi-storey car parks point-of-sales terminals, hotel-business, homes for the elderly courts factory areas etc.	 Interface PSI-01 as part of the Maintenance Package, RS232
TCS Service Temporary connection to the TCS:BUS.	 Maintenance Interface  Service Device TCSK01	one-man programming of bell buttons installation of special functions testing of voice communication	In all TCS:BUS-systems	 Service Device TCSK-01
